# K-12 Retrofit Solutions

Upgrade campus access control –  
from existing exterior openings  
to inside the classroom

Access control is fundamental to protecting K-12 students, staff and assets during day-to-day operations and in emergency situations. ASSA ABLOY Electronic Security Hardware, Adams Rite, Alarm Controls and Medeco offer a wide range of access control solutions to help meet the various challenges facing K-12 security and facility management teams, including time and budget.

## Perimeter

Gate and fence access control prevents unauthorized personnel from penetrating a school's campus. Electromagnetic locks, electric strikes and gate locks, certified for outdoor use, are designed to leverage the existing hardware to make retrofit upgrades easy and efficient.

## Exterior Doors

From auditoriums to front office vestibules, education facilities have a variety of exterior openings. Access control can be scaled from mechanical devices to hardwired or wireless devices based upon application, local codes and budgets. Electric strikes, electrified deadlatches, exit devices and trim can be integrated with existing access control systems to ensure that every opening within the building envelope is secured and monitored on the same security system.

## Interior Doors

The needs of an education facility's interior openings can vary depending on where a space is located within the building and its use. Electromagnetic locks, electric strikes and exit devices strengthen access control on hollow metal, wood and aluminum doors. As schools incorporate glass structures to increase safety, access control can be added with surface mounted digital glass door locks, wireless readers and additional locking solutions.

## Key Control

Rekeying facilities to account for student and faculty turnover can be time-consuming, cumbersome and expensive. With electronic cylinders, key access can be electronically changed in minutes. Intelligent keys allow for accountability and electronic scheduling while utilizing existing hardware and reducing the risk of lost keys.

## Cabinet Doors & Drawers

From administrative offices and teacher resources to nurse and health supplies, wired, wireless and stand-alone cabinet locks offer audit trail capabilities and accountability for sensitive data, pharmaceutical equipment and personal belongings.

## Emergency Situations

School administrators and staff need a fast method to lock down spaces from entire buildings to individual classrooms. Lockdown buttons and monitoring stations provide security in seconds.

## Power

Selecting an incorrectly sized power supply can increase upfront purchase and installation costs as well as future costs, like energy usage. Facilities managers should have the ability to select the power supply that appropriately fits the needs of the specific application.
