Application

Any door with first man in option through the use of DT-7

Operation

Outside Operation: From a scheduled time the DT-7 will lock and unlock the doors at specific times. If the program for the DT-7 has passed its opening time and the closure on terminals 3 and 4 has not been broken it will remain locked until a valid code has been entered on the keypad (or other switching device). That will de-energize the lock and allow access into the vestibule and will also allow the DT-7 to unlock the doors for the remainder of the scheduled time. After hours the DK-26 will allow entry.

Inside Operation: From the inside you can egress though the use of the TSB-3 bars which will work at any time.

Securitron System Components

2 each Magnalock M62
1 each Digital Keypad DK-26
2 each Touch Sense Bar TSB-3CL
1 each Power Supply BPS-24-1
1 each Battery B-24-5
